## PRODUCT FEATURES

### Groove Circuit

With Groove Circuit, you can easily create remixes by simply pressing the dedicated buttons. This enables you to replace the drum parts of a track – even while it's playing – with different drum loops, changing them into different genres and performing unique remixes effortlessly. And, by applying effects to the drum parts, you can easily create fills, build-ups, and breakdowns.[1]

### Stems FX in Serato DJ Pro

The DDJ-GRV6 is compatible with Serato DJ Pro, which includes a Stems FX feature. Express yourself by applying effects to the separate Stems of a track – drums, bass, vocal, or melody, and apply the included overlay sheet to change the button labels to Stems FX for ease of use.

### Club-standard layout style

The DDJ-GRV6 features large jog wheels, 8 Performance Pads which are positioned above the jogs – just as they are on the flagship CDJ-3000 multi player – and the Beat FX in the mixer section includes CH Select buttons from the DJM-A9. All this means you can play with a feeling similar to using club-standard equipment.
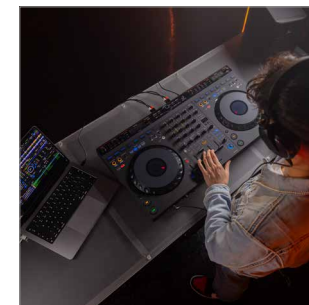

### Multi-device compatibility

You can choose to use the DDJ-GRV6 with not only rekordbox for Mac/Windows but also rekordbox for iOS/Android. With the option of playing via a mobile device, you have freedom to DJ in your preferred style and in a variety of different settings.[3]

### Smart Rotary Selector and Discover Function

The DDJ-GRV6's new Smart Rotary Selector offers multi-directional control (up/down, left/right, rotate, and push) for easy navigation through media, playlists, and track lists when using rekordbox ver. 7 on Mac/Windows. The Discover button gives quick access to the Track Suggestion feature.[2]

### Intuitive User Experience and Design

The DDJ-GRV6 features a matte black finish and ergonomic layout for easy use. Its minimal display and clear indicators help DJs navigate functions, while the "step up" layout of the Groove Circuit above the Performance Pads prevents accidental jog wheel touches.

[1] The Groove Circuit function is only available on rekordbox for Mac/Windows. | For rekordbox for iOS/Android, the function is linked to the sampler and other functions. | For Serato DJ Pro, the function is linked to Stems FX (read on for more info).
[2] The Discover function is only available in rekordbox for Mac/Windows.
[3] The DDJ-GRV6 does not support Bluetooth® connections. | Only channels 1 and 2 are available for playback in rekordbox for iOS/Android.
